

Army National Stock Number Item Request Standardization

1. The request for National Stock Number (NSN) assignment is now processed through the Defense Medical Logistics Item Identification System (DMLIIS) and serves medical readiness needs by providing the following:
 - a. Automated workflow and collaboration among the Services (Army, Navy, Air Force, and Marine Corps), Defense Standardization Board (DMSB), Defense Supply Center Philadelphia (DSCP), and Defense Logistics Information Systems (DLIS), in the creation of new item medical National Stock Number (NSN), Joint Control Number (JCN), and non-Medical NSN requests.
 - b. NSN creation and maintenance requests enter the system through a secure, authenticated, web-based application. The DMLIIS application is utilized by personnel located throughout the world who are affiliated with field and service medical logistics, military services, the DMSB, and DSCP. A new item action may involve NSN or JCN. Once created, the item will traverse through a define workflow life cycle to terminus. Collaboration between defined interested parties will be fostered throughout the process. Once the item reaches its terminus within DMLIIS, it will be queued and sent forward; if applicable, to external source authority. The result information will complete the item life cycle (or remand the item for additional processing back in DMLIIS). The users will also be able to search the system, ascribe service interest to other service items and generate report metrics/status of requests.
 - c. Automated collaboration between those same entities for maintenance, updating, and when required, termination and deletion of NSN data in Federal Logistics Information (FLIS), which propagates the corrected NSN information to downstream systems, including the Medical Services Information Logistics System (MEDSILS), Medical Electronic Customer Assistance (MECA), and the Universal Data Repository (UDR), Business System Modernization (BSM), and CAGE Center Central Contractor Registry (CCR).
2. DMLIIS replaces three legacy applications and used by the Services, DMSB, and DSCP to create and maintain medical logistics item identification elements such as NSNs and JCNs. The diagram below shows a high level depiction of the DMLIIS and its data flow:

3. Before an item is submitted for NSN assignment, it must be researched in one or more of the following: WebFLIS; UDR on CD-ROM; FED LOG on CD-ROM; and DLIS on-line.
4. Provide all information you have on the item in the appropriate sections of the form. Please reference the assigned request number on the literature that you send. Mandatory information is:
 - o Item Name
 - o Item Description
 - o Source Of Supply - Name, Address, and Phone Number
 - o Part Number, National Drug Code (NDC), Trade Name, or Universal Product Number (UPN)
 - o Unit of Issue
 - o Unit Price
 - o Weight and Cube

- Air worthiness
- Product Literature or Supporting Documentation (How It Will Be Sent)
- A Vendor's Website Is Preferred - Provide the URL on the Form

Preferred but not mandatory information is:

5. Common Name
6. UA (Unit Assemblage that the item will be a component of or associated with)

You May Also Send Literature By:

FAX TO: DSN 343-2938 or Commercial 301-619-2938,

MAIL TO: USAMMA, ATTN: MCMR-MMO-A
693 Neiman Street
Fort Detrick, MD 21702-5001

7. After reviewing the narrative instruction data seen above, click on the link below that will take you to DMMOnline. DMMOnline is a suite of applications managed by DSCP.
8. If you are a new requester, you can register by clicking on the following link <https://dmmonline.dscp.dla.mil/Registration/sitelogin.aspx> and select New User Registration and fill out the required information. Upon completion of registration please allow 3-5 business days for validation and approval.
9. If you have any questions about submitting your request, please contact USAMMA's Standardization Service Analysts at DSN 343-4321/4426 or commercial 301-619-4321/4426.
