NOTICE

This Supply Bulletin is devoted entirely to
Strategic Capabilities Provided to the War Fighter

FOREWORD

This issue of the Supply Bulletin (SB 8-75-S7) is dedicated entirely to the Strategic Capabilities and Materiel Directorate (SCMD) within the U.S. Army Medical Materiel Agency (USAMMA), Fort Detrick, Maryland. This edition focuses on the mission and functions of the Directorate and its capability to support the "Warfighter" during a full range of contingency operations. While all of USAMMA's Directorates, Divisions, Branches, and Offices provide support to customers during contingency operations, the SCMD is the office that manages the medical portion of the Department of the Army (DA) Deputy Chief of Staff for Logistics' (DCSLOG) Army Prepositioned Stocks (APS) Program, formerly known as war reserves. In addition, SCMD manages The Surgeon General's (TSG's) Centralized Contingency Programs such as Medical Chemical Defense Materiel (MCDM), Potency and Dated Materiel (P&D), and Reserve Component Hospital Decrement (RCHD) programs. SCMD is also responsible for the USAMMA Emergency Operations Center (EOC) activated during contingency operations.

The SCMD mission is to provide quality strategic planning, execution and management of Class VIII (medical) materiel during a full spectrum of operations as approved by Headquarters, Department of the Army (HQDA). This medical logistics mission ensures that the proper medical materiel will be available in the proper quantities at the proper place and at the proper time to support Army initial and follow-on requirements. Full participation in the Army and the Department of Defense planning, requirements determination, materiel management, and transportation processes will accomplish our mission.

This issue of SB 8-75-S7 will describe each major program the SCMD manages and illustrate how those programs support contingency operations, show how customers can determine what assets are available, and explain the hand-off process for centrally managed assets to gaining units.

Gone are the days when the USAMMA dropped all mobilization requisitions on the wholesale system. Reduced resources have resulted in the development of multiple acquisition strategies that target a particular portion of our total requirement. While there are peacetime economic efficiencies in this approach, it puts significant stress on the deployment process when all of these seemingly fragmented programs have to come together to form a single cohesive effect. The need to understand all of these individual strategies, as well as how they come together for deployments, is essential to understanding medical contingency logistics.

The medical commodity is on the cutting edge of these strategies. Only now are other commodities looking at implementing some of the strategies we have pioneered. As a pioneer, we have had success and failures during development and implementation of these strategies. We are always learning and we look to you, our customers, for input on additional ways we can support you during contingency operations. In that light, key SCMD personnel have traveled to various Major Army Command (MACOM) locations, marketing our strategic capabilities and soliciting Commanders-In-Chief (CINC) for ways SCMD can improve or realign existing programs and if necessary, develop new programs to better support the warfighter.

Requests for clarification or updates can be made to the designated points of contact for each program as listed in this SB. Feel free to call the designated offices related to the contingency programs identified herein when you require clarification or

updates. Please feel free to contact our office with recommended changes to this SB. We want this SB to cover the topics important to the warfighter and to be a useful document in developing contingency plans and briefings. This document is intended to be useful to the warfighter, so comments and recommendations are encouraged and can be directed to:

Commander
U.S. Army Medical Materiel Agency
ATTN: MCMR-MMS
1423 Sultan Drive, Suite 100
Fort Detrick, Maryland 21702-5001
Telephone DSN 343-4417 or 301-619-4417
Telefax DSN 343-4404 or 301-619-4404

A glossary is provided for the numerous acronyms referenced in this issue. It is located after the last chapter.

CHAPTER 1. ARMY PREPOSITIONED STOCK (APS) PROGRAM

1-1. APS PROGRAM BACKGROUND

- a. The traditional methods of locating sustainment stocks in Theater Reserve sites under local or theater commander control is no longer consistent with supporting the dynamics of a rapidly changing world with constrained resources - nor is it in keeping with current policy objectives. The Army has become a much smaller, predominantly Continental United States (CONUS) based force. The Army's Strategic Mobility Program, when fully implemented, will greatly expand the Army's ability to quickly move personnel and equipment to potential contingencies throughout the world. Forward presence will be achieved through minimum outside continental United States (OCONUS) stationing, with increased reliance on unit rotations and exercise deployments to provide stability in dynamic regions. To accomplish this objective, a balance of airlift, sealift, and sustainment (prepositioned equipment and supplies) is needed to provide the ability to project forces worldwide and sustain those forces during a contingency.

- b. In May 1992, the Chief of Staff of the Army (CSA) directed a reduction in War Reserve (WR) and Operational Project (OP) stocks and transferred management and accountability responsibilities for this materiel to the Army Materiel Command (AMC) and OTSG, for SC VIII. The USAMMA was designated by OTSG as the executive agent for SC VIII materiel and manager of the SC VIII portion of the Army War Reserve (AWR) Program. In 1998, the AWR Program was redesignated Army Prepositioned Stock (APS).

1-2. APS AND SC VIII APS LOCATIONS

- a. The objective of the CSA APS management policy is to change the use and ownership of APS materiel from specific CINCs and theaters to a common user stockpile of equipment and supplies that can support the worldwide requirements of any warfighting CINC. These stocks now fall under the broad heading of APS materiel and are grouped into five regions. APS-1 consists of CONUS based stocks, APS-2 stocks are stored in Europe, APS-3 stocks are prepositioned aboard ships, APS-4 stocks are located in the Pacific, and APS-5 covers Southwest Asia. The APS program encompasses prepositioned Brigade/Unit Sets, Operational Projects (OP), and sustainment stocks.

- b. As the SC VIII APS Program Manager, USAMMA maintains all total item property records on in-house systems. To accomplish the day to day management of SC VIII APS materiel, USAMMA uses existing activities as accountable activities to maintain and manage prepositioned assets.

APS-1	Sierra Army Depot Anniston Army Depot Rock Island Arsenal 32nd Medical Logistics (MEDLOG) Battalion (BN) 147th MEDLOG BN
APS-2	U.S. Army Medical Materiel Center-Europe (USAMMCE)
APS-3	Various afloat ships and Combat Equipment Group Afloat (CEG-A), Charleston, SC
APS-4	Combat Equipment Base – North East Asia (CEB-NEA) Sagami Army Depot Okinawa
APS-5	Combat Equipment Base – Kuwait (CEB-KU) Combat Equipment Group – Qatar (CEG-Q) USAMMCE Administrative Support Unit-Southwest Asia & Bahrain (ASU-SWA)

c. USAMMA has Memorandums of Agreement (MOA), Interservice Support Agreements (ISSA), and Statements of Work (SOW) with the activities to govern APS operations at the storage sites. In addition, USAMMA personnel make periodic visits to the activities in order to resolve issues and view APS assets.

1-3. SC VIII APS ASSETS

a. USAMMA has the SC VIII materiel below prepositioned to support the warfight.

(1) Six (6) Brigade Sets (A second brigade set will be prepositioned Afloat in FY01 for a total of seven (7))

Two (2) for Europe and one (1) for Italy stored at USAMMCE
One (1) in Korea
One (1) in Qatar
One (1) Afloat

(2) Hospital Capability: Afloat, Korea, Japan, Bahrain, and Kuwait (CSH (-) 84 Bed)

(3) Line Item and Set Configured Sustainment Stocks: CONUS, Europe, Afloat, Korea, Japan, and Bahrain.

b. Until AMC (Field Support Command) completes the Automated Battlebook System (ABS) for each theater, visibility of specific sets and their pack data can be provided to units by contacting their higher headquarters. The higher headquarters, in turn, will notify the Strategic Capabilities and Materiel Directorate.

1-4. ADDITIONAL INFORMATION

For additional information pertaining to SC VIII APS Program management, contact

USAMMA
ATTN: MCMR-MMS-M

Fort Detrick, MD 21702-5001
Telephone: DSN 343-4428 or 301-619-4428

**CHAPTER 2. ARMY PREPOSITIONED STOCK-3 (APS-3)
PREPOSITIONED AFLOAT PROGRAM**

2-1. ARMY PREPOSITIONED AFLOAT IMPLEMENTATION

- a. The APS-3, Army Prepositioned Afloat (APA), is a direct result of the Army Strategic Mobility Program (ASMP). The ASMP was initiated to address the conclusions of the Mobility Requirements Study (MRS). The MRS concluded that the Army can only increase its deployability through an expanded investment of sealift and airlift, prepositioning, and transportation infrastructure.
- b. APA provides the combatant CINCs with deployment flexibility and increased capability to respond to a crisis or contingency with a credible force. The purpose of a PREPO Afloat operation is to project a heavy force early in the crisis capable of complimenting other early arriving forces; to rapidly reinforce a lodgment established by Army early entry forces; to protect key objectives (port, airfield, etc.); and to be prepared to conduct subsequent operations across the range of military operations.
- c. APA operations range from employment of one ship in support of a humanitarian assistance mission to the employment of all APA vessels required to support the CINC's campaign plan. Equipment prepositioned afloat has universal utility for multiple CINCs. It carries critical weapons systems, equipment, and supplies common to all theaters. It is a force package that is mobile and can be quickly repositioned in response to a crisis anywhere in the world.
- d. APA allows the early deployment of an Army heavy brigade force to support the needs of CINCs in order to minimize the initial requirement for the strategic lift. To do this, the brigade must arrive in the theater of operations and be combat effective by C+15. In view of global operations, APA must provide the flexibility to conduct operations across the range of military operations.

2-2. APS-3 COMPOSITION

- a. APS-3 supports the Army's Power Projection concept and is a critical part of the ASMP. As of June 2000, APS-3 consists of 10 ships containing medical supplies. At end state these medical assets will consist of:
 - (1) Two (2) Medical Force 2000 (MF2K) configured Combat Support Hospitals (CSH) on the GIBSON and TITUS.
 - (2) One (1) Medical Recommended Stockage List (MRSL) Contingency Corps split on the GIBSON and TITUS.
 - (3) One (1) 2x2 Brigade Set on various ships.
 - (4) One (1) 1x1 Brigade Set on various ships.
- b. These sets do not contain exclusionary items such as controlled drugs, refrigerated or potency and dated item. Two methods exist to provide these items: the deploying medical unit will bring them To Accompany Troops (TAT), and/or these items will be provided to the receiving medical unit by the Logistics Support Element, Medical Logistics Detachment (LSE MLST), if a push package from Charleston is required.

2-3. ASSET VISIBILITY AND ADDITIONAL INFORMATION

- a. Asset visibility for each ship is also available via the Automated Battlebook System (ABS) which is produced on CD-ROM. A CD-ROM can be obtained by contacting AMC (Field Support Command) at 703-739-8542.
- b. Deploying units identified to receive APS-3 medical assets are strongly encouraged to contact their higher headquarters. The higher headquarters, in turn, will contact the SCMD, DSN 343-4428 or 301-619-4428. This office can provide asset visibility down to NSN level for all APS-3 medical supplies and equipment and will be able to recommend supplies and equipment the unit must bring as TAT. Additionally, personnel from this Directorate, DSN 343-4408 or 301-619-4408, can discuss operational and logistical issues for consideration during pre-deployment, deployment, and re-deployment.

CHAPTER 3. WAR RESERVE REQUIREMENTS

3-1. REQUIREMENTS DETERMINATION. Perhaps the most interesting and controversial part of the APS Program is the development of requirements. Let's take a look at four of the programs and how requirements are developed for them.

- a. Brigade/Unit Sets. HQDA, Deputy Chief of Staff for Operations (DCSOPS) has determined the need to preposition seven (7) APS Brigade Sets, one (1) exercise Brigade Set for Desert Spring (previously known as Intrinsic Action) unit rotations and nine (9) Unit Sets (hospitals) worth of materiel at strategic locations. This will enable units to deploy from home station with minimal equipment. Brigade/Unit Sets are documented as unmanned Table of Organization and Equipment (TO&E) units. They have a Unit Identification Code (UIC) and AMC does the Unit Status Report (USR) on these sets since the majority of the materiel within the Brigade is under their management. USAMMA provides the SC VIII feeder data to AMC. The Unit Sets are a new designation given to the hospitals that used to be part of TSG Operational Projects. OTSG DCSOPS has worked to get these first-to-fight assets also identified by Modified TO&E (MTO&E) and UIC. The SCMD programs the requirements for Brigade Sets and Unit Sets after receiving information from HQDA regarding type of units, location of units and quantity of units. Since these are separate units, the MTO&E could be modified to specific missions but currently they are modeled after Force Package-1 (FP1) MF2K configured active hospitals.
- b. Operational Projects (OP). Operational projects are authorization documents that provide the MACOM a way to identify additional materiel authorized for a specific mission. AR 710-1 (*Centralized Inventory Management of the Army Supply System*), Chapter 6, goes into detail of how OPs are established, how the use of OP supports contingency operations, etc. MACOM identifies the medical materiel requirements for an OP, creates a list of items (DA Form 4145, *Operational Project List of Items*) and provides classified justification through Command channels to AMC for staffing with HQDA. After HQDA DCSLOG/DCSOPS gives approval, the APS managers at AMC and USAMMA fund for acquisition or cross-level existing assets against this new requirement.
- c. War Reserve (WR) Sustainment. HQDA tasks SCMD to develop a WR Sustainment requirement based upon the Time-Phased Force Deployment Data (TFPDD). SCMD assumes the sets, kits, and outfits (SKO) authorized to the units represent the quantity and type of items that will be consumed treating patients. The Resupply By Unit Type (REBUT) requirements determination model takes the TPFDD, pulls in unit authorization data from the Requisition Validation (REQ-VAL) system, and determines the number of each set required for a given period of time. The quantity and type of sets from the REBUT model goes into the USAMMA mainframe computer. The mainframe computer pulls in the unit assemblage components and multiplies the number of sets times the allowance for each component. If the component is a piece of equipment, the requirement is zero filled. (You don't want to replace equipment every 5 to 10 days.) If the component is reusable (sterilizable), the quantity is reduced to 10 to 20 percent of the computed requirement depending on the degree of reuse. Appendix A describes in detail the computation process for developing requirements for SC VIII APS Sustainment.
- d. Medical Chemical Defense (MCDM). The requirement for MCDM is based upon two factors: (1) initial issues to get troops out the door, and (2) sustainment or replacement of the MCDM when it is consumed. The initial issue is a simple multiplication of the personnel strength times the authorized quantity per soldier. Sustainment is computed on the population-at-risk times the Joint Chiefs of Staff (JCS) approved rate for that theater of operation.

3-2. ADDITIONAL INFORMATION

For additional information pertaining to SC VIII APS Program management, contact

USAMMA
ATTN: MCMR-MMS-M
1423 Sultan Dr., Suite 100
Fort Detrick, MD 21702-5001
Telephone: DSN 343-4462 or 301-619-4462

CHAPTER 4. CLASS VIII CONTINGENCY MATERIEL PROGRAMS

4-1. INTRODUCTION

a. While the Army has established specific programs to support contingency operations, OTSG has also established centralized managed programs. These OTSG Contingency Programs support areas not covered by the DA programs. The outline below shows these two umbrella programs and their component programs.

- (1) Army Prepositioned Stock
 - Brigade/Unit Sets
 - Operational Projects
 - War Reserve Sustainment
- (2) The Surgeon General's Contingency Stock
 - Medical Chemical Defense Materiel (MCDM)
 - Potency & Dated Materiel (P&D)
 - Reserve Component Hospital Decrement (RCHD)

b. Major differences between these two programs:

- (1) Army Prepositioned Stocks
 - DCSLOG of the Army owns this materiel even though it is sitting on MACOM soil
 - AMC manages the non-Class VIII, USAMMA manages Class VIII
 - HQDA (DCSLOG/DCSOPS) are the only activities authorized to approve the release of APS stock
 - Once authorization is given, AMC/USAMMA will direct movement as necessary
- (2) OTSG Contingency Programs
 - OTSG owns this materiel
 - Managed by USAMMA
 - OTSG is only activity authorized to release OTSG Contingency stock

c. In addition to the stocks in the contingency materiel program, troops are required to receive certain vaccines prior to deployment. The vaccine, needles and syringes, cotton swabs, etc., are a U.S. Army Medical Command (USAMEDCOM) responsibility at the individual installation and are not part of the above discussion.

4-2. ADDITIONAL INFORMATION

a. For additional information pertaining to the MCDM Program, contact:

USAMMA
 ATTN: MCMR-MMS-M
 1423 Sultan Dr., Suite 100
 Fort Detrick, MD 21702-5001
 Telephone: DSN 343-4421 or 301-619-4421

- b. For additional information concerning the centrally managed P&D program, contact:

USAMMA
ATTN: MCMR-MMS-P
1423 Sultan Dr., Suite 100
Fort Detrick, MD 21702-5001
Telephone: DSN 343-4461/4422/4429 or 301-619-4461/4422/4429.

- c. For additional information pertaining to the RCHD program, contact:

USAMMA
ATTN: MCMR-MMS-M
1423 Sultan Dr., Suite 100
Fort Detrick, MD 21702-5001
Telephone: DSN 343-4421/4355/4428 or 301-619-4421/4355/4428.

CHAPTER 5. THE ARMY CENTRALLY MANAGED POTENCY AND DATED (P&D) MATERIEL PROGRAM

5-1. PROGRAM BACKGROUND

a. Operations Desert Shield/Storm (ODS) after-action reviews revealed that, for a number of reasons, units did not deploy with the medical potency and dated materiel in their Unit Basic Load (UBL). This caused great strain on the commercial supply system as units were ordering their deployment requirements at the last minute, and in some cases, placing orders for deployment levels of materiel back to the local Class VIII resupply activity after arriving in theater. Medical units that deployed early found themselves competing for supplies with units scheduled to deploy much later on the Time Phased Force Deployment Data (TPFDD) schedule. This sudden surge against vendor stocks overwhelmed industry and caused some units to deploy without their full complement of medical stocks.

b. Funding constraints at the unit and DoD level, along with changes in the way industry manufactures and manages materiel, prompted the CSA to approve the TSG's recommendation that OTSG assume responsibility for the centralized funding, management, and distribution of medical P&D materiel for Force Package 1 and 2 (FP1 and 2) medical units at Echelons Above Division (EAD) which deploy in the first 31 days of a conflict. In January 1997 OTSG, in turn, passed the mission to USAMMA.

c. To support this mission, the USAMMA developed the Centrally Managed P&D Materiel Program and it utilizes a variety of actions/strategies to provide access to sources of supply. These actions/strategies include the prepositioning of supplies and contracting with the commercial sector for both ownership of, and access to, inventory. The USAMMA identified the programmed National Stock Numbers (NSNs) and total issue quantity requirements by stratifying the authorizations of each P&D NSN in every Unit Assemblage (UA) for every generic EAD FP1 and 2 type of deployable unit through day 31. The Centrally Managed P&D Materiel Program coined the terms "Unit Deployment Package" for a unit's medical P&D materiel and "Initial Resupply Package" for any follow on sustainment packages through day 31 of a deployment.

(1) Unit Deployment Package (UDP) – consists of the medical potency dated materiel with a shelf-life code other than zero for EAD FP1 and 2 units that deploy within the first 31 days of a conflict. A CSH UDP is specific for a Combat Support Hospital, an ASMB UDP is specific for an Area Support Medical Battalion, etc.

(2) Initial Resupply Package (IRP) – consists of the same medical materiel as a UDP with the purpose of replenishing a UDP. An IRP will be automatically pushed by USAMMA into the Theater of Operations based upon the days of supply of the UDP

d. These packages do not include (and the unit, itself, is responsible for) Support Kit Items. The Centrally Managed P&D Materiel Program does have access to some items in support of 6630-01-344-9996 (coagulation timer), 6630-01-316-5085 (analyzer hematology) and 6630-01-376-9823. Appendix B is a breakout of UDPs by unit type or Standard Requirements Code (SRC) (unless the dollar value of the medical P&D portion of the SRC was less than \$500). Although the NSNs of SRCs with a dollar value of \$500 or less are not listed in Appendix B, the requirements are still covered by this program and those unit types are listed below.

<u>SRC</u>	<u>UNIT TYPE</u>
432	HHD MED GROUP
498	PM SANITATION DET
499	PM ENTO DET
527LA	TM HEAD & NECK
527LB	TM NEUROSURGERY
527LC	TM EYE SURG
537LA	TM PATHOLOGY
537LB	TM DIALYSIS
537LC	TM INFECT DIS
909	MEDLOG SPT DET

e. Appendix C is a cross-reference list for those original UA NSNs, which are unsupportable within the program and for which substitute NSNs are in place. Availability of a particular NSN can be verified by contacting USAMMA, ATTN: MCMR-MMS-P, Fort Detrick, MD 21702-5001; DSN 343-4461, 4422 or 4429 (commercial prefix: 301-619).

f. This program gives USAMMA the ability to “push” UDPs and IRPs (minus Support Kit Items) to those initial EAD deploying medical units in FP1 and 2. UDP quantities are based on the same unit “Days of Supply” (DOS) schedule as the UBL¹. An IRP (identical in makeup to the supported UDP) replenishes the UDP and will be automatically pushed by USAMMA into the Theater of Operation. Selected units deploying during the first 31 days will receive IRPs through day 31 of a conflict. Based on a unit’s time of deployment and the days of supply a unit carries, one can determine how many IRPs a unit will receive. For example, an EAD FP1 or 2 Combat Support Hospital that deploys into theater on day 5 will receive its UDP of P&D medical materiel from the USAMMA. The CSH UDP has a 10-day supply, so that Combat Support Hospital will also receive an IRP on day 15 and on day 25. After the 31 days of support provided by the Centrally Managed P&D Materiel Program, the USAMMA sustainment programs will support and maintain the medical requirements of deployed units.

It is important to note that all medical units must develop an internal plan to procure all materiel required to support their deployment and plan the transportation (TPFDD) of this materiel.

g. While the Centrally Managed P&D Materiel Program will provide materiel to those units deploying on/before day 31, units must keep in mind that the TPFDD is a flexible and fluctuating schedule. Should an activity with an initial deployment date sooner than day 31 suddenly find itself falling BELOW the day 31 mark, that unit will fall off USAMMA’s list of units scheduled to receive a UDP. Units must plan appropriately.

5-2. PROCUREMENT STRATEGIES

a. USAMMA utilizes a combination of acquisition and management strategies to either gain access to industry stocks or to purchase P&D materiel outright. Purchased P&D materiel may be stored and managed by a vendor or pre-positioned as a UDP. These stocks are not “flagged” to any one unit. They will be used as swing stocks for issue to selected medical activities. The following is a discussion of the current strategies encompassing the central management of P&D materiel.

b. The pre-positioning of UDPs enables USAMMA to quickly outfit early deploying units with their required P&D items. During FY97, USAMMA built and stored 10 Combat Support Hospital (CSH) UDPs and two Area Support Medical Battalion (ASMB) UDPs at various strategic locations worldwide. Currently (FY00), USAMMA has pre-positioned seven CSH UDPs, three ASMB UDPs and one Field Hospital UDP; and is pursuing a new strategy for storing two CSH UDPs (previously pre-positioned in the AFLOAT program) in the commercial sector. The storage activity is responsible for administering all actions associated with the Care of Supplies in Storage (COSIS). They will forecast maintenance costs and requirements and submit the information to USAMMA for programming and budget planning. The following sites maintain one or more UDPs for the Centrally Managed P&D Program:

Sierra Army Depot (California)
Walter Reed Army Medical Center (WRAMC)
Germany
Korea
Japan
Bahrain/Kuwait

¹ The difference between a UDP and a UBL is that a UDP only focuses on P&D materiel, whereas the UBL is an all-encompassing list of the materiel, both medical and nonmedical, necessary to support deployment.

c. In addition to pre-positioning assets, the Centrally Managed P&D Program contracts with industry for inventory ownership and guaranteed access. These contracts are established through Defense Supply Center Philadelphia (DSCP) with a variety of vendors, both distributors and manufacturers, because the program requirements include a wide variety of potency and dated items (pharmaceuticals, controlled substances, intravenous solutions, x-ray supplies, dental supplies, laboratory supplies, medical/surgical supplies and medical chemical defense items). Typically, these contracts include a rotation clause to accommodate the potential expiration of P&D items that are stored at the vendor (with either P&D program ownership or guaranteed access). Because the Centrally Managed P&D Program funds these contracts, they only support EAD FP1 and 2 units through day 31 of a conflict. The following is a list of contractual vehicles that provide readiness in the Centrally Managed P&D Program:

(1) Vendor Managed Inventory (VMI). The Vendor Managed Inventory contracts reduce the costs (purchase, storage and rotation) of purchased materiel by paying for access to a distributor's inventory. The distributor is paid a fee to rotate the materiel with commercial sales to insure the availability and freshness. The P&D Program has access to three types of stock in a VMI contract:

Government Purchased Materiel (GPM) — The P&D Program owns the materiel, but the contractor/distributor stores and rotates it.

Contractor Inventory Materiel (CIM) — This stock is part of the normal commercial inventory of the contractor/distributor and the P&D Program is guaranteed access.

Contractor Furnished Materiel (CFM) — The contractor/distributor furnishes stock beyond the normal commercial inventory to increase guaranteed access to the P&D Program.

There are two VMI contracts in the P&D Program, one for pharmaceutical items and one for medical/surgical items.

(a) The VMI Pharmaceutical contract is with Bindley Western Drug Company and covers 350 P&D line items. Specifically, this contract covers pharmaceutical NSN's in the Federal Stock Class (FSC) 6505. DSCP has guaranteed its peacetime pharmaceutical sales through this contract to facilitate stock rotation. This contract does not provide any set configuration, but negotiations are ongoing.

(b) The VMI Medical/Surgical contractor is Allegiance Healthcare, which provides 100 P&D line items. These medical surgical items fall into the FSC 6510, 6515, 6530 and 6640 series. DSCP does not aid Allegiance Healthcare by pushing any peacetime sales through this contract. The contract does provide for set configuration and the P&D Program may order medical/surgical items in the contract by UA or by line item.

(2) Stock Rotation Contracts. The P&D Program contracts with several different manufacturers to store and rotate P&D materiel with their commercial sales. All items in Stock Rotation contracts are purchased by the P&D Program and managed by the manufacturer. Those items currently on Stock Rotation contracts are:

- Intravenous Fluids (FSC 6505)
- Controlled Substances (narcotics) (FSC 6505)
- Laboratory Reagents (FSC 6550)

(3) Corporate Exigency Contract (CEC). The structure of a CEC is similar to a VMI contract, except that a VMI contract is an agreement with a distributor and a CEC is an agreement with a manufacturer. As in VMI the inventory is divided into three categories (GPM, CIM and CFM), however, because the contractor is a manufacturer there can be two subtypes of CIM. The first subtype is safety stock which is stock on-hand as part of normal commercial business and the second subtype is commercial production base which is stock that is in the production pipeline and available for normal commercial business. The Centrally Managed P&D Program maintains one CEC with Johnson & Johnson, Ethicon for sutures (FSC 6515).

(4) Industrial Base Maintenance Contract (IBMC). Certain medical items are military unique and, as a result, are not supportable in the commercial sector. An IBMC pays a contractor to provide labor, materiel production, maintenance, storage and provision for certain surge capability. The P&D Program maintains three items of Medical Chemical Defense Materiel (MCDM) in an IBMC with Meridian Medical Technologies, Inc. These items are:

Atropine Auto-injectors,
Pralidoxime Chloride Injection (2-PAM)
Diazepam Injection

These items are maintained as UDP requirements and should not be confused with a separate SCMD program specifically for MCDM beyond Centrally Managed P&D Program EAD FP1 and 2 requirements.

d. P&D Requirements currently not sourced under a contract are procured through DSCP MILSTRIP requisitioning or on-line web based ordering via the Electronic Cataloging/Laboratory Integrated Delivery System (ECAT/LIDS) at DSCP. ECAT/LIDS provides access to dental and laboratory items and the system is expected to expand in the future. The Centrally Managed P&D Program has access to x-ray items through a DLA-funded PIC (Photo Imaging Contract) at DSCP.

e. In concept, USAMMA will utilize "surge" clauses in selected regional Prime Vendor contracts to support the deployment requirements of initial FP1 and 2 units at Division and Below. The P&D surge requirements for these medical units were developed the same way as the requirements for the EAD medical units and provided to DSCP. However, the Centrally Managed P&D Program has NOT been defined to provide P&D items for DIVISION AND BELOW units. The surge clause provides for access to supplies that would far exceed normal demand history/ordering patterns and on-hand stocks.

5-3. STATUS AND IMPLEMENTATION

a. USAMMA currently has contractual access to approximately 75 percent of the medical P&D NSNs necessary to support FP1 and 2 EAD deployments through day 31. The Army Medical Department (AMEDD) has pre-positioned a total of 11 Unit Deployment Packages in support of CSHs, ASMBs and a Field Hospital (plus two CSH UDPs pending a future commercial venture). Additionally, the contracts that the Centrally Managed P&D Program has put in place provide ready access to non-expired materiel in a cost efficient manner. USAMMA continually works with DSCP to find sources of supply for the remaining unsourced P&D materiel to support those same FP1 and 2 medical units.

b. USAMMA has implemented the Centrally Managed P&D Program. USAMMA is confident that this approach will improve readiness and minimize risk by using multiple acquisition strategies to ensure that FP1 and 2 EAD medical units are prepared to support the full spectrum of war. For the soldier in the field, this program will ensure that those initial deploying units in FP1 and 2 will deploy with, and receive initial resupply of, all P&D materiel necessary to support medical operations through day 31. Full implementation of this program remains dependent on continued funding by DA and continued successful partnering with the commercial sector.

5-4. ADDITIONAL INFORMATION

For additional information pertaining to the Centrally Managed P&D Program, contact:

USAMMA

1423 Sultan Dr., Suite 100
Fort Detrick, MD 21702-5001
Telephone: DSN 343-4461/4422/4429 or 301-619-4461/4422/4429

CHAPTER 6. MEDICAL CHEMICAL DEFENSE MATERIEL (MCDM)

6-1. BACKGROUND

In 1994, the Office of The Surgeon General (OTSG) directed the U.S. Army Medical Materiel Agency (USAMMA) to centrally manage the initial issue, Individual Service Member (ISM), of MCDM required for mobilization because of the numerous problems associated with the decentralized management of MCDM. The Division Ready Brigade (DRB) concept was developed and implemented to reduce overall program costs, reduce workload at the unit level, and improve readiness for early deploying units.

6-2. DRB COMPONENTS

Twenty-five DRB Sets are stored in strategic locations throughout the world. The DRB materiel will support the initial stages of a contingency while allowing the industrial base adequate time to move into full production. USAMMA tracks each item of the DRB by lot number and expiration date. This information is used to budget for and requisition replacement materiel. Each DRB consists of the initial issue to support 5,000 ISMs, and consists of the following items:

NSN	ITEM	QUANTITY
6505-01-174-9919	Antidote Treatment Kit Nerve Agent (Mark I Kits or Nerve Agent Antidote Kit – NAAK)	15,000
6505-01-274-0951	Diazepam Injection 5 mg/ml 2ml Syringe Needle Unit (Convulsant Antidote Nerve Agent - CANA)	5,000
6505-01-178-7903	Pyridostigmine Bromide Tablets 30 mg 210 tablets/package (PBT or Nerve Agent Pretreatment Pill - NAPP)	1,000

6-3. RELEASE AUTHORITY

a. The release authority for all centrally funded ISM initial issue requirements is HQDA and it is coordinated with USAMMA. Deploying units will pass requests for ISM initial issue MCDM to the Supply Support Activity (SSA). Units must provide their SSA their UIC and the Unit Line Number (ULN)/Operation Plan Number/Deployment Order Number from their deployment orders, and the quantity of the materiel required. The SSA will provide the UIC, and other applicable data to the USAMMA, EOC, DSN 343-4408/4432 or (301) 619-4408/4432. Requirements will be validated against the TPFDD. If the request is valid, the appropriate types and quantities of MCDM will be approved for release from the DRB. If the SSA is not a DRB storage site, materiel will be sent from the nearest DRB facility/depot. If deployment is not validated, USAMMA will notify the SSA.

b. Upon return from a deployment, units will turn in the MCDM to the SSA. Documentation for any shortages due to use or damage must be provided to the SSA.

6-4. PYRIDOSTIGMINE BROMIDE TABLETS (PBT)

PBT is classified as an Investigational New Drug (IND) by the FDA. The Federal law requires use and distribution with a treatment protocol. To be authorized for use, the Theater CINC must state the threat and need to use PBT/NAPP to the JCS. The Assistant Secretary of Defense (Health Affairs) will request release from the President of the US who will then request the FDA to allow the DOD to use PBT/NAPP under the IND protocol and request a waiver of informed consent. When the approval is received, the CINC can authorize release and use (as the mission requires) the PBT.

6-5. REQUISITION PROCESS

a. For all requests for service regulated (AAC "A" medical CDM (atropine, 2-Pam, NAAK/Mark I Kits, CANA/Diazepam, or PBT/NAPP), minus JCS directed deployments, the unit will submit:

- (1) a letter through command channels to:

Commander, USAMEDCOM
ATTN: MCLO-P
2050 Worth Road
Ft. Sam Houston, TX 78234-6008.

The letter should state the following:

(a) Who gave the unit the mission that required it to have on hand medical CDM. Attach a copy of the mission, if available,

- (b) Quantity, description, and NSN of the medical CDM being requested, and
- (c) Description of the storage area where medical CDM will be stored.

(2) a funded requisition to the supporting IMSA/MEDLOG BN with a copy of justification.

b. The IMSA/MEDLOG BN will submit the requisition offline to USAMMA. Included with the requisition should be a copy of the justification letter, the unit UIC, POC and phone number. If the materiel is required as components of a MES/SKO then the LIN or NSN of the MES/SKO must be stated along with the number of sets authorized and on hand. Requests for other MCDM that is not service-regulated will be processed as a routine request through the system. Individual issue of medical chemical defense materiel is free issued to deploying units.

6-6. ADDITIONAL INFORMATION

For additional information, refer to Chapter 9, AR 40-61, *Medical Logistics Policies and Procedures*, or contact:

MEDCOM
ATTN: MCLO-P
Ft Sam Houston, TX, 78234-6008
Telephone: DSN 471-7066 or 210-221-7066

CHAPTER 7. RESERVE COMPONENT HOSPITAL DECREMENT (RCHD)

7-1. BACKGROUND

a. In April 1993, USAMMA was tasked with the mission of managing the RCHD program. General responsibilities include the modernization, sustainment, COSIS, preparation of Decrement Feeder Data Reports, and the coordination of materiel movement. Currently, there are 32 hospitals in the RCHD. Twenty-five hospitals will be stored at Sierra Army Depot and the remainder of the hospitals will be stored at Defense Distribution Depot Hill Utah (DDHU).

7-2. PROGRAM COMPOSITION

The RCHD stocks consists of Deployable Medical Systems (DEPMEDS) Medical Materiel Sets (MMS), medical and non-medical Associated Support Items of Equipment (ASIOE), and the Test Measurement and Diagnostics Equipment (TMDE). The RCHD program does not include Other Support Equipment such as trucks and communications equipment. RCHD stocks are used to bring the Army reserve units from their peacetime authorized levels to their ALO1 level for MMSs and medical and non-medical ASIOE. These RCHD stocks serve as a decrement to a unit's Minimum Essential Equipment for Training (MEET) sets. RCHD is the difference between the required and authorized materiel on the MTO&E for MMSs and ASIOE

7-3. GENERAL INFORMATION

- a. Each September, USAMMA provides RCHD Feeder Data Report to the U.S. Army Reserve Command and to the RC unit. However, if data has changed significantly, an updated RCHD Feeder Data Report is provided reflecting the most up-to-date information for that quarter. The report is displayed to the Line Item Number (LIN) level of detail. In accordance with procedures outlined in Army Regulation (AR) 220-1, *Unit Status Reporting*, units will calculate the equipment on-hand portion of the USR using the on-hand assets in their MEET set and the equipment reflected on the RCHD Feeder Data Report.
- b. OTSG will direct release of RCHD materiel in coordination with FORSCOM and USAR to meet contingency, emergency, and peacetime requirements. The U.S. Army Forces Command develops deployment plans for RCHD units and provide guidance to the U.S. Army Reserve Command. Upon receipt of deployment notification, the deploying unit will notify the USAMMA EOC to request RCHD materiel. USAMMA validates the deployment of the unit with the TPFDD. If deployment has been validated, then USAMMA will coordinate with the applicable storage facility and the receiving unit for the shipment of materiel. Normally units will receive the RCHD materiel once they arrive in the area of responsibility. An RCHD shortage list will be provided to the unit prior to movement. The unit is responsible to prepare shipment of their MEET sets (HUB/HUS/HUM/HUH) and obtain the To Accompany Troops (TAT) requirements. According to FM 100-17-3, *The Reception, Staging, Onward Movement, and Integration (RSO&I)*, Logistics Support Element (LSE) was formed to facilitate the RSO&I of APS. The LSE Medical Logistics Support Team (MLST) will be responsible for the issue of the RCHD materiel to the unit at the Air or Sea Ports of Debarcation.
- c. Above are the general call forward procedures for the RCHD decrement. The actual deployment and issue of RCHD will be Mission, Enemy, Troops, Terrain and Time (METT-T) driven.

7-4. ADDITIONAL INFORMATION. For additional information contact:

USAMMA
ATTN: MCMR-MMS-M
1423 Sultan Dr., Suite 100
Fort Detrick, MD 21702-5001
Telephone: DSN 343-4421/4455 or 301-619-4421/4455.

CHAPTER 8. EMERGENCY OPERATIONS CENTER (EOC) AND THE LOGISTICS SUPPORT ELEMENT (LSE), MEDICAL LOGISTICS SUPPORT TEAM (MLST)

8-1. EMERGENCY OPERATIONS CENTER (EOC)

- a. The Chief, Operations & Plans Division, SCMD, is responsible for the establishment and operation of the EOC. The EOC operation serves as a single focal point for customers. Its resources include STU-III phones, fax, and GCCS/SIPRNET access. The EOC integrates and analyzes multi-directorate information to facilitate a timely decision process. The EOC identifies tasks and distributes them to appropriate directorates.
- b. The EOC integrates and analyzes multi-directorate information to facilitate a timely decision process. This allows the functional experts to remain in their normal work areas where they maintain their libraries of information and automation capabilities. The EOC functions as the gatekeeper that prioritizes requirements for any given theatre of operation and is capable of monitoring several wargame scenarios simultaneously. The EOC will track and monitor the movement and requests for low-density stocks. This Center will ensure that the right materiel is in the right place at the right time.
- c. Though all EOC members may not move from their current assigned office, the physical location of the Center will be in the Operations and Plans Division, SCMD.
- d. For additional information on EOC activation and operations contact

USAMMA
ATTN: MCMR-MMS-p
1423 Sultan Dr., Suite 100
Fort Detrick, MD 21702-5001
Telephone: DSN 343-4408 or 301-619-4408 (secure capability)
Secure e-mail address ladethrs@force1.army.smil.mil or ladetsam@force1.smil.mil

8-2. LOGISTICS SUPPORT ELEMENT (LSE), MEDICAL LOGISTICS SUPPORT TEAM (MLST)

- a. Mission: On order, the LSE MLST deploys to the Theatre of Operation. Its mission is to hand-off medical materiel and equipment (includes RCHD), provide SC VIII logistics support and conduct follow-on missions as directed.
- b. Team Composition: The team is comprised of Active Army Officers, DA Civilians and U.S. Government contractors. The team has the capability to inventory medical materiel, prepare hand receipts, perform maintenance checks on medical equipment, and hand-off medical materiel. The team organizes into two APS hand off teams upon deployment, to facilitate split operations capability. The MLST is the SC VIII issue proponent of the AMC LSE.
- c. Employment: The MLST is USAMMA's conduit to issue War Reserve stock, RCHD, and inventory from vendors to deploying units. The team may hand-off materiel that is prepositioned in Theatre or Afloat. The team deploys with or without the LSE into any area of operation and executes USAMMA logistics missions. This team is self-sustainable; it has the equipment, life support and force protection capabilities to sustain itself.
- d. Command and Control (C2): The LSE MLST consists of Soldiers, Civilians and Contractors who work for USAMMA in some capacity on a daily basis. These personnel bring different expertise to the team. When the team is activated, the personnel are brought together to form the team. SCMD dictates the mission requirements of the team and sets its priorities. This team deploys with deployment orders on a TPFDD. The LSE MLST always remains under the control of the Commander, USAMMA.

e. For additional information on this topic, contact:

USAMMA
ATTN: MCMR-MMS-P
1423 Sultan Dr., Suite 100
Fort Detrick, MD 21702-5001
Telephone: DSN 343-4408 or 301-619-4408

CHAPTER 9. ARMY PREPOSITIONED STOCK (APS) AUTOMATED SYSTEMS

9-1. BACKGROUND

As SC VIII APS Program Manager, USAMMA maintains all total item property records on in-house systems. To accomplish the day to day management of SC VIII APS materiel, USAMMA uses units with on-the-ground assets as accountable activities to maintain and manage prepositioned assets. The accountable property records are currently being maintained on the Theater Army Medical Materiel Information System (TAMMIS) and the Defense Medical Logistics Standard Support (DMLSS) System Assemblage Management (AM).

9-2. TAMMIS

TAMMIS has 3 modules for asset management. The system includes the following modules:

- a. Medical Assemblage (MEDASM) – this module was utilized to manage SKOs or UAs to the component level of detail. The critical data elements used in the management of APS is UA, NSNs, allowances, on-hand quantities and quality assurance data such as manufacture/expiration date, lot number, etc. This module has been replaced at the majority of the APS sites by DMLSS-AM.
- b. Medical Maintenance (MEDMAINT) – this module is utilized to track the maintenance history on equipment items such as non-medical and medical ASIOE, TMDE.
- c. Medical Supply (MEDSUP) – this module is utilized to maintain accountability of line item and end item stocks and to requisition materiel.

9-3. DMLSS

Currently, DMLSS AM is the only module of DMLSS being fielded. This module is utilized to manage SKOs or UAs to the component level of detail. The critical data elements used in the management of APS is UA, NSNs, allowances, on-hand quantities and quality assurance data such as manufacture/expiration date, lot number, etc. This module has been fielded at the majority of the APS sites to replace TAMMIS MEDASM.

9-4. APS STORAGE SITES. As of June 2000, APS storage sites are using the following information management systems:

- a. APS-1
 - Sierra Army Depot - DMLSS
 - Anniston Army Depot – Standard Depot System (SDS)
 - Rock Island Arsenal – SDS
 - 32nd MEDLOG BN - TAMMIS
 - 147th MEDLOG BN – TAMMIS
- b. APS-2/5: USAMMCE for APS-2/APS-5 – TAMMIS
- c. APS-3: Combat Equipment Group Afloat, Charleston, SC - TAMMIS & DMLSS
- d. APS-4
 - 16th MEDLOG BN – TAMMIS & DMLSS
 - Sagami Army Depot – TAMMIS & DMLSS
 - Camp Kinser, Okinawa – SDS – DMLSS (16th MEDLOG BN)

e. APS-5

Combat Equipment Base-Kuwait (CEG-KU) - DMLSS
Combat Equipment Group-Qatar (CEG-Q) - TAMMIS & DMLSS (from Bahrain)
ASU - SWA, Bahrain - TAMMIS & DMLSS

9-5. ASSET VISIBILITY

IAW AR 710-1, the USAMMA is required to report APS asset visibility for the Joint Medical Asset Repository (JMAR) and Joint Total Asset Visibility (JTAV). The APS assets are currently reported to Total Asset Visibility (TAV) by SCMD through a File Transfer Process (FTP) to the Logistics Support Activity (LOGSA) by record type with a Document Identifier Code (DIC) of 'BF7'. This reporting is only at the end item level of detail and NOT the component level of detail for the sets, kits and outfits (SKOs). APS line item and component level of detail for SKOs are being reported to JMAR by the Information Management Information Technology Division, USAMMA. The APS SKO component level of detail is being pulled from either TAMMIS MEDASM or DMLSS AM from the forward APS sites. Information is also extracted from a USAMMA unique system for some of the APS hospitals component level of detail.

9-6. ARMY WAR RESERVE DEPLOYMENT SYSTEM (AWRDS).

- a. The storage sites also report APS Brigade/Unit Sets to the AWRDS. AWRDS feeds data to the ABS, which is maintained by AMC (Field Support Command). AWRDS also maintains data to the component level of detail.
- b. Data for SC VIII materiel stored at USAMMCE for the APS-2 Europe Brigade/Unit Sets is sent from USAMMCE to the Combat Equipment Group, Europe (CEGE) for loading into AWRDS. CEGE sends information by FTP to LOGSA.
- c. APS-3 Afloat (all stocks) component level of detail for each container and end items to the Combat Equipment Group-Afloat (CEG-A), for inclusion in AWRDS. CEG-A FTP's information to LOGSA.
- d. APS-4 Korea Brigade/Unit Set end items to CEB-NEA and are sent by FTP to LOGSA.
- e. APS-5 Kuwait Brigade/Unit Set end items are reported to ATAV from the Standard Property Book System-Redesign (SPBSR) by email to LOGSA.
- f. APS-5 Qatar Brigade/Unit Set end items are reported to Combat Equipment Group-Qatar (CEG-Q), for inclusion in AWRDS. CEG-Q then sends information to LOGSA via FTP.

9-7. ADDITIONAL INFORMATION.

For additional information on this subject, contact:

APPENDIX A. SUPPLY CLASS VIII SUSTAINMENT REQUIREMENTS PROCESS

A-1. This appendix provides the algorithm used to develop SC VIII Sustainment Stock requirements.

A-2. Process

a. USAMMA develops SC VIII sustainment requirements for war reserve and Logistics Plans (LOGPLAN) using two models. The first is a personal computer based system known as REBUT. It is a front-end system that computes the quantity of SKOs needed to support the warfight over a given period of time. REBUT passes this information to the second model that resides on the mainframe computer. This model is the NAE for war reserves or NAJ for LOGPLANs. The NAE/NAJ mainframe computer model develops the NSN level requirements from the number of sets and the components of the set.

b. The basic requirements formula is:

(# of sets required) **X** (SKO Turnover) **X** (intensity Rate) **X** (Component Allowance) **X** (Consumption Percent) = Requirement

c. The REBUT Model

(1) Assumptions:

- The Required Delivery Date (RDD) is the valid day consumption begins.
- The MTOE is accurate.
- The unit deploys with its basic load of medical supplies.
- The SKOs authorized to a unit represents the types of supplies the unit will need to perform its military mission.
- Each SKO is designed to last a particular number of days. Usually this number is found in the supply catalog for that SKO.
- Intensity rate is the way to influence requirements based upon a ratio of actual vs. set design

(2) Model input: A time-phased force list containing at least the UIC and RDD

(3) Model process:

The REBUT model performs 3 functions.

(a) The REBUT builds part of the requirement record by taking the time-phased force list (UIC, personnel strength, and RDD), and matches the UIC on the force list to the UIC in the authorization file. (The authorization file is an extract of the Requisition Validation (REQ-VAL) database.) REBUT then builds a separate record for each line item number (LIN) authorized to that UIC. The LIN, required quantity, authorized quantity and on hand quantity are written to each record.

(b) The REBUT computes a resupply start date (RSD) for each set as the RDD plus the number of days of supply contained in the SKO.

(c) The REBUT computes the number of times each set turns over for a given period. For war reserves, SCMD computes in 30-day periods. For LOGPLANs, SCMD computes in 10-day periods.

(continued) **APPENDIX A. SUPPLY CLASS VIII SUSTAINMENT
REQUIREMENTS PROCESS**

Example:

Unit has an RDD of 10 and the computation is for an Aidsman Bag (LIN U65480) that has 5 days of supply.

$$\text{RDD} + \text{DOS in set} = \text{Resupply Start Date (RSD)}$$

$$10 + 5 = 15$$

This *example* computes for the first 30-day period.

<u>Last Day in Period – RSD</u>	=	Number of SKO turns
Days in set		
<u>$\frac{30 - 15}{5}$</u>	=	3

The final step is to multiply the number of SKO turns times the intensity rate for that period. Each 30-day period can have a different rate. For *example*, if the intensity rate is 71%, the final calculation would be:

(# of SKO turns)	X	(Intensity Rate)	=	Adjusted SKOs
3	X	71	=	2.13

This means that we need to replace the consumable items within the set 2.13 times in this 30-day period. Remember we only require 15 days of supply since the unit arrives on day 10 and has 5 days of basic load with it.

If more than one of the set is authorized, i.e., if the MTOE calls for 10 of these sets, then each of the 10 sets would turn over 2.13 times for a total of 21.3 sets worth of consumable items.

Authorized Qty	X	Adjusted SKO Turnover	=	# Sets
10	X	2.13	=	21.3

(d) Model output: The adjusted quantity of each SKO by period is the number of times the components in the set will have to be replaced or turned over.

d. The NAE model

(1) Assumptions: Consumption percentage reflects the consumability of components within a SKO.

(2) Model input: Adjusted SKO turnover quantity by period from REBUT.

(continued) **APPENDIX A. SUPPLY CLASS VIII SUSTAINMENT
REQUIREMENTS PROCESS**

(3) Model Process: The quantity of each NSN required is a result of multiplying the adjusted SKO turnover times the allowance of each component times the consumption percent for that NSN.

Set Turnover	Component NSN	Component Allowance	X	Consumption Percent	=	NSN Rqmt
2.13	6505 01 153 3015	Tetracane	1	X	100	= 2
	6505 01 177 1982	Clindamycin	40	X	100	= 85
	6505 00 344 7800	Handle Surg	1	X	10	= 0

(.2 rounds down)

(4) Model output: The quantity of each NSN required.

A-3. In addition, USAMMA computes war reserve requirements for individual NSNs that are not part of SKOs. It is done outside of these models. These separate requirements are based upon items that the MACOM or OTSG nominates and the formula provided by the requesting activity. Generally these items are computed based on population at risk times the treatment protocol for that item.
